Factors affecting the success of dental implants

Surface: SLActive®

For years, implants with the Straumann® SLA® surface have delivered excellent long-term results and clinically documented high implant success rates 1-12. SLActive® is based on the scientifically proven SLA® topography. In addition, it has a fundamentally improved hydrophilic surface chemistry which promotes the initial healing reaction 13-15, osseointegration properties 16-22 and shows excellent survival and success rates of 97% or higher 23-26 even in challenging clinical situations 27-33.
